

## LM317M 3-Terminal Adjustable Regulator

### 1 Features

- Output Voltage Range Adjustable from 1.25-V to 37-V
- Output Current Greater Than 500-mA
- Internal Short-Circuit Current Limiting
- Thermal-Overload Protection
- Output Safe-Area Compensation
- Q Devices Meet Automotive Performance Requirements
- Customer-Specific Configuration Control Can Be Supported for Q Devices Along With Major-Change Approval

### 2 Applications

- Electronic Point-of-Sales
- Medical/Health/Fitness Applications
- Printers
- Appliances/White Goods
- TV/Set-Top Box

### 3 Description

The LM317M is an adjustable 3-terminal positive voltage regulator capable of supplying more than 500-mA over an output-voltage range of 1.25-V to 37-V. The LM317M is exceptionally easy to use and requires only two external resistors to set the output. Furthermore, both line and load regulation are better than standard fixed regulators.

In addition to having higher performance than fixed regulators, the LM317M includes on-chip current limiting, thermal-overload protection, and safe-operating-area protection. All overload protection remains fully functional if the ADJUST terminal is disconnected.

The LM317 is a floating regulator meaning there is no device ground terminal. Quiescent current flows to the load instead of being wasted flowing to ground. Regulated output voltage of hundreds of volts is possible if the maximum input to output differential does not exceed 40-V at any time. Device can be used as a floating current source controlled by a single resistor.

Normally, no capacitors are needed unless the device is more than six inches from the input filter capacitors, in which case an input bypass capacitor of any type is needed. An optional electrolytic or tantalum output capacitor can be added to improve transient response. Ceramic output capacitors can be used but output ringing may be present on transients. The ADJUST terminal can be bypassed with any type of capacitor to achieve high ripple-rejection ratios, which are difficult to achieve with standard three-terminal regulators.

### Terminal Functions

TERMINAL		I/O	DESCRIPTION
NAME	NO.		
ADJUST	1	I	Output feedback voltage
OUTPUT	2	O	Regulated output voltage
INPUT	3	–	Input supply voltage, 2.5 to 40V relative to OUTPUT terminal

## 6 Specifications

### 6.1 Absolute Maximum Ratings<sup>(1)</sup>

over operating temperature range (unless otherwise noted)

	MIN	MAX	UNIT
$V_I - V_O$ Input-to-output differential voltage		40	V
$T_J$ Operating virtual junction temperature		150	°C

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 6.2 Handling Ratings

	MIN	MAX	UNIT
$T_{STG}$ Storage temperature range	–65	150	°C

### 6.3 Recommended Operating Conditions

			MIN	MAX	UNIT
$V_I - V_O$	Input-to-output voltage differential		2.5	37	V
$I_O$	Output current		0.01	0.5	A
$T_J$	Operating virtual junction temperature	LM317MKTPR	0	125	°C
		LM317MDCY, LM317MDCYR, LM317MKVURG3, LM317MQKTPR, LM317MQDCYR, LM317MQDCYRG3	-40	125	

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		LM317M	UNIT

## 6.5 Electrical Characteristics

over recommended operating virtual-junction temperature range,  $V_I - V_O = 5\text{ V}$ ,  $I_O = 0.1\text{ A}$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS <sup>(1)</sup>		MIN	TYP	MAX	UNIT
Line regulation <sup>(2)</sup>	$V_I - V_O = 3\text{ V to }40\text{ V}$	$T_J = 25^\circ\text{C}$		0.01	0.04	%V
		Full temperature range		0.02	0.07	
Load regulation	$I_O = 10\text{ mA to }500\text{ mA}$	$T_J = 25^\circ\text{C}$		0.1	0.5	%V <sub>O</sub>
		Full temperature range		0.3	1.5	
ADJUST terminal current				50	100	μA
Change in ADJUST terminal current	$V_I - V_O = 3\text{ V to }40\text{ V}$ , $I_O = 10\text{ mA to }500\text{ mA}$			0.2	5	μA
Reference voltage	$V_I - V_O = 3\text{ V to }40\text{ V}$ , $I_O = 10\text{ mA to }500\text{ mA}$		1.2	1.25	1.3	V
Output-voltage temperature stability				0.7		%
Minimum load current to maintain regulation				3.5	10	mA
Maximum output current	$V_I - V_O \leq 15\text{ V}$		500	900		mA
	$V_I - V_O = 40\text{ V}$ , $P_D \leq P_{D(max)}$ , $T_J = 25^\circ\text{C}$		150	250		
RMS output noise voltage (% of V <sub>O</sub> )	$f = 10\text{ Hz to }10\text{ kHz}$ , $T_J = 25^\circ\text{C}$			0.003		%V <sub>O</sub>
Ripple rejection	$V_O = 10\text{ V}$ , $f = 120\text{ Hz}$ , $T_J = 25^\circ\text{C}$	$C_{ADJ} = 0^{(3)}$		65		dB
		$C_{ADJ} = 10\text{ }\mu\text{F}^{(3)}$	66	80		
Long-term stability	$T_J = 25^\circ\text{C}$			0.3	1	%/1k hrs

(1) Pulse-testing techniques are used to maintain the junction temperature as close to the ambient temperature as possible.

(2) Line voltage regulation is expressed here as the percentage change in output voltage per 1-V change at the input.

(3) CADJ is connected between the ADJUST terminal and ground.

## 7 Detailed Description

### 7.1 Overview

The LM317 is a 500-mA linear regulator with high voltage tolerance up to 40-V. The device has a feedback voltage that is relative to the output instead of ground. This ungrounded design allows the LM317 to have superior line and load regulation. It also allows the LM317 to be used as a current source or current sink using a single resistor. Any output voltage from 1.25-V to 37-V can be obtained by using two resistors. The bias current of the device, up to 10-mA, flows to the output; this current must be used by the load or the feedback resistors. The power dissipation will be the product of pass element voltage and current, mathematically:

$$(V[\text{input}] - V[\text{output}]) \times I[\text{output}] \quad (1)$$

The application heat sink must be able to absorb this power.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

#### 7.3.1 NPN Darlington Output Drive

NPN Darlington output topology provides naturally low output impedance and an output capacitor is optional. To support maximum current and lowest temperature, 2.5-V headroom is recommended ( $V_I - V_O$ ).

#### 7.3.2 Overload Block

Current limit scales with higher voltage to provide a safe operation area for the NPN pass elements. Over temperature shutdown protects against overload or under heat sinking.

#### 7.3.3 Programmable Feedback

Op amp with 1.25-V offset input at the ADJUST terminal provides easy output voltage or current (not both) programming. For current regulation applications, a single resistor whose resistance value is  $1.25V/I_{OUT}$  and power rating is greater than  $(1.25V)^2/R$  should be used. For voltage regulation applications, two resistors set the output voltage. See the [Typical Application](#) section for schematic and resistor formula.

## Feature Description (continued)

### 7.3.4 Current Sources

The two current sources represent the typical 'adjust terminal current' and typical 'minimum current for regulation'.

## 7.4 Device Functional Modes

### 7.4.1 Normal operation

The device OUTPUT terminal will source current necessary to make OUTPUT terminal 1.25-V greater than ADJUST terminal to provide output regulation.

### 7.4.2 Operation With Low Input Voltage

The device requires up to 2.5-V headroom ( $V_{in}-V_{out}$ ) to operate in regulation. With less headroom, the device may drop out and OUTPUT voltage will be INPUT voltage minus drop out voltage.

### 7.4.3 Operation at Light Loads

The device passes its bias current to the OUTPUT terminal. The load or feedback must consume this minimum current for regulation or the output may be too high.

### 7.4.4 Operation In Self Protection

When an overload occurs the device will shut down Darlington NPN output stage or reduce the output current to prevent device damage. The device will automatically reset from the overload. The output may be reduced or alternate between on and off until the overload is removed.

### 7.4.5 Operation at Light Loads

The device passes its bias current to the OUTPUT terminal. The load or feedback must consume this minimum current for regulation or the output may be too high.

## 8 Applications and Implementation

### 8.1 Application Information

The LM317M is a linear voltage regulator. The feedback is the output terminal to adjust terminal differential. The output voltage can be set to any value from 1.25-V to  $V_{out}$  maximum with two resistors.

### 8.2 Typical Application

#### 8.2.1 Design Requirements

For this design example, use the parameters listed in [Table 1](#).

Table 1. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage range	(Output Voltage + 2.5V) to 37V
Output voltage	$V_{ref} \times (1 + R_2/R_1) + I_{adj} \times R_2$

#### 8.2.2 Detailed Design Procedure

##### 8.2.2.1 Input Capacitor

An input capacitor is not required, but it is recommended, particularly if the regulator is not in close proximity to the power-supply filter capacitors. A 0.1-μF ceramic or 1-μF tantalum provides sufficient bypassing for most applications, especially when adjustment and output capacitors are used.

##### 8.2.2.2 Output Capacitor

An output capacitor improves transient response, but it not needed for stability.

##### 8.2.2.3 Feedback Resistors

The feedback resistor set the output voltage using [Equation 2](#).

$$V_{ref} \times (1 + R_2/R_1) + I_{adj} \times R_2 \quad (2)$$

##### 8.2.2.4 Adjustment Terminal Capacitor

The optional adjustment terminal capacitor will improve ripple rejection by preventing the amplification of the ripple. When capacitor is used and  $V_{OUT} > 6V$ , a protection diode from adjust to output is recommended.

### 8.2.2.5 Protection Diodes

If the input is shorted to ground during a fault condition, protection diode (D1) prevents discharge through the LM317M. If the output is shorted to ground during a fault condition, protection diode (D2) prevents adjust terminal capacitor discharge through the LM317M.

### 8.2.2.6 Design Options and Parameters

Common Linear Regulator designs are concerned with the following parameters:

- Input voltage range
- Input Capacitor range
- Output voltage
- Output current rating
- Output capacitor range
- Input Short Protection
- Stability
- Ripple Rejection

### 8.2.2.7 Output Voltage

$V_o$  is calculated as shown:

$$V_o = V_{ref} \times \left(1 + \frac{R_2}{R_1}\right) + (I_{adj} \times R_2) \quad (3)$$

Because  $I_{adj}$  typically is 50- $\mu$ A, it is negligible in most applications.

### 8.2.2.8 Ripple Rejection

$C_{ADJ}$  is used to improve ripple rejection; it prevents amplification of the ripple as the output voltage is adjusted higher. If  $C_{ADJ}$  is used, it is best to include protection diodes.

### 8.2.2.9 Input Short Protection

If the input is shorted to ground during a fault condition, protection diodes provide measures to prevent the possibility of external capacitors discharging through low-impedance paths in the IC. By providing low-impedance discharge paths for  $C_O$  and  $C_{ADJ}$ , respectively, D1 and D2 prevent the capacitors from discharging into the output of the regulator.

## 8.2.3 Application Curves

Figure 12. Line Transient Response vs Time

Figure 13. Load Transient Response vs Time

## 9 Power Supply Recommendations

The LM317 is designed to operate from an input voltage supply range between 2.5-V to 40-V greater than the output voltage. If the device is more than six inches from the input filter capacitors, an input bypass capacitor, 0.1- $\mu$ F or greater, of any type is needed for stability.

## 10 Layout

### 10.1 Layout Guidelines

- It is recommended that the input terminal be bypassed to ground with a bypass-capacitor.
- The optimum placement is closest to the VIN and GND terminals of the device. Care must be taken to minimize the loop area formed by the bypass-capacitor connection, the VIN terminal, and the GND terminal of the IC.
- For operation at full rated load, it is recommended to use wide trace lengths to eliminate IR drop and heat dissipation.

### 10.2 Layout Example

## 11 Device and Documentation Support

### 11.1 Trademarks

All trademarks are the property of their respective owners.

### 11.2 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.

### Products

Audio	<a href="http://www.ti.com/audio">www.ti.com/audio</a>
Amplifiers	<a href="http://amplifier.ti.com">amplifier.ti.com</a>
Data Converters	<a href="http://dataconverter.ti.com">dataconverter.ti.com</a>
DLP® Products	<a href="http://www.dlp.com">www.dlp.com</a>
DSP	<a href="http://dsp.ti.com">dsp.ti.com</a>
